

Introduction

Drive one full universe (512 channels) of DMX data directly from your USB port using the SmartShow USB-DMX-OE. This device will emulate an openEnttec DMX driver.

Specifications

USB1.1 & USB2.0 compliant.

Drivers available for Win98/2000/XP/Vista/7/8/9/10, Mac OSX, Linux

FTDI-FT232RL USB to serial driver, masquerading as an 'openEnttec' device

DMX-RDM not supported.

DMX output non-isolated.

Parts Supplied

USB-DMX-OE USB-A to USB-Mini cable

USB Connection & Driver Installation

Connect the USB-DMX-OE to your USB port using the USB-A to USB-Mini cable supplied. Once connected your PC will automatically search and install the FTDI driver required for the product. If you want to download the drivers separately visit :

Windows (32&64): http://www.ftdichip.com/Drivers/CDM/CDM_v2.12.28_WHQL_Certified.zip

Mac (10.3-10.8): http://www.ftdichip.com/drivers/VCP/MacOSX/FTDIUSBSerialDriver_v2_2_18.dmg

Mac (10.9 +): http://www.ftdichip.com/Drivers/VCP/MacOSX/FTDIUSBSerialDriver_v2_4_2.dmg

Linux: http://www.ftdichip.com/Drivers/VCP/Linux/ftdi_sio.tar.gz

For more information or updates, please visit <http://www.ftdichip.com/Drivers/D2XX.htm>

Compatible Applications

Your USB-DMX-OE masquerades as an 'openEnttec' style device, which is currently supported in many lighting design applications available :

DMXControl (Win), Freestyler (Win), QLC + (Win / Mac / Linux),

DMX 4 Linux (Linux), DigiSelect (Win) , FootLight (Mac)

Jinx! LED Matrix Control (Win), LightFactory (Win), Lightforge (Win),

Lightkey (Mac), Lightning DmxControl (Mac), Lights UP (Win)

Martin M-PC (Win), VirtualLightDesk (Mac), Vixenlights (Win)

Multiple USB connections

If you have more than one USB-DMX-OE (connected via separate USB ports or perhaps a small powered USB hub), it may be possible to run them from the same application by patching the universes correctly to the FTDI serial ports that will be available in the 'devices' section of your application set up.

Dimensions

Length : 80mm Length x 18mm diameter
